

Inventory I/O Control is an enhancement to Microsoft Dynamics® GP Bill of Materials module. Accounting for secondary items commonly referred to as by-products or co-products is often overlooked for reasons such as inconsistent output quantities, sub-standard grade or quality; or systems lacking the functionality and capability to handle one to many relationships. Inventory I/O Control gives Inventory Managers flexibility to monitor and control inventory levels and flow.

Inventory I/O Control applies to an environment where the materials used to assemble, create or build a primary product results in the creation of *one or more* secondary products. Flexible enough for many business operations, Inventory I/O Control would be beneficial for industries such as chemical, toys, furniture, textiles and *many more*.

Better manage and control inventory levels and flow.

Record and track one or many secondary items that can be used as inputs to further processing, end products available for sale or scrap with or without a salvage value.

Streamline workflow and easily adjust inventory inputs and outputs.

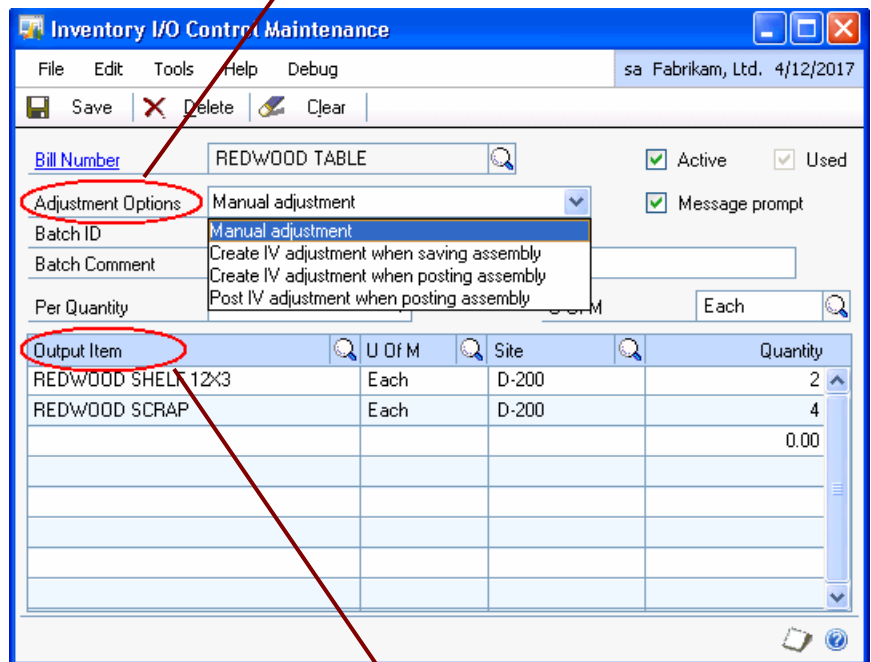

Define raw material quantities (inputs) required to build the primary product in Microsoft Dynamics GP Bill of Materials. Define the expected secondary products (outputs) in Inventory I/O Control.

Improve flexibility and eliminate tedious, manual entry.

With one mouse click confirm outputs and adjust entries to reflect actual quantities at the completion of each transaction.

Automatically create inventory entries as assemblies to include the output quantities based on expected results defined in the formula set-up.

- *Select from four adjustment options and accurately post to inventory.*

- *Easily create an unlimited number of secondary items which are often referred to as by-products or co-products.*

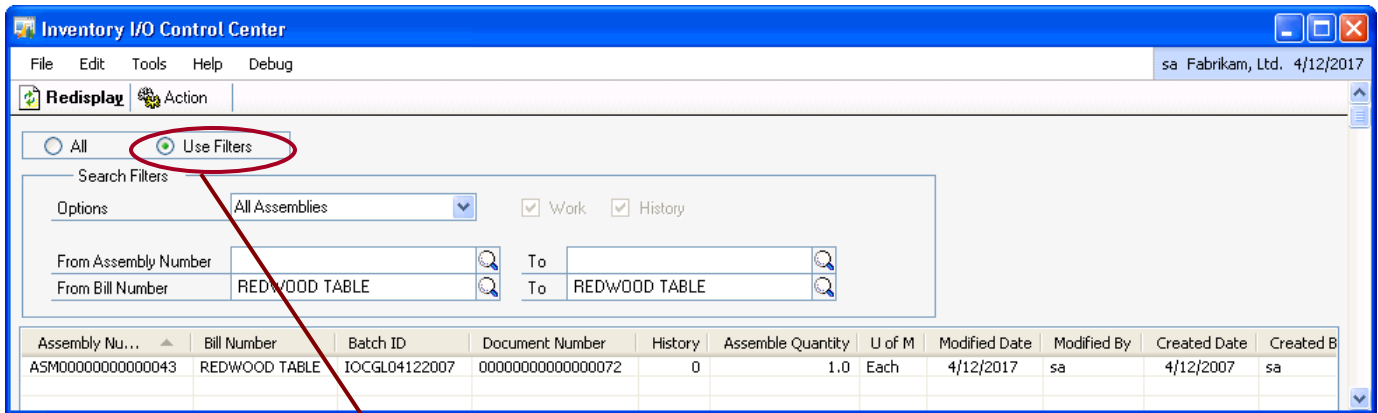

Solutions for Microsoft Dynamics GP

Inventory I/O Control

Flexible Inventory Management

System requirements for Inventory I/O Control include:

- Microsoft Dynamics GP 9.0
- Inventory Control
- Bill of Materials

Use the flexible Inventory I/O Control Center to search and filter data by:

- Open and historical transactions.
- Transactions that have a secondary item adjustment.
- Transactions that do not have a secondary item adjustment.
- Range of transaction numbers.
- Range of transaction items.

Encore Business Solutions: Experience, Quality and Trust Since 1990

Encore remains committed to serving the Microsoft Dynamics® community by developing high quality products and providing exceptional customer service. We continue to expand our reach, maintain our reputation and strive to provide value in everything we do. Our products are designed to extend the functionality of Microsoft Dynamics® GP, offering productivity gains, flexibility and stability for growth and success.
