Microsoft Enterprise Mobility

Architectures matter. That's why our enterprise mobility solutions are designed to run in the cloud and work with your existing on-premises infrastructure.

Our cloud-first approach to managing a mobile enterprise is the fastest, most cost effective way to meet new business challenges and accommodate new devices, new apps, and new hires—without worrying about scale, maintenance, or updates.

Why you’ll love it

It protects Office better
It is the only solution designed to protect your Microsoft Office email, files, and apps

It saves you money

It’s up to 50% less than the cost of buying standalone solutions from other vendors

It just works

You can deploy it in just a few clicks, without setup, always up to date, and connects to your existing on-premises resources

It’s integrated

One identity platform protects all—users, devices, apps, and data

It’s comprehensive

Data protection support for Android, iOS, Mac OS, Windows, and Windows mobile devices, including over 2,500 popular SaaS apps

It’s about scale, maintenance, or updates.

We support Android, iOS, Mac OS, Windows, and Windows mobile devices responsibility worldwide

No matter where your users work or live, we support all popular devices

We support Android, iOS, Mac OS, Windows, and Windows mobile devices

We support Android, iOS, Mac OS, Windows, and Windows mobile devices

Work anywhere

Your users want to work from home, on the road, or wherever they choose. Give them the tools they need to be productive and safely access corporate resources from anywhere—using any device.

Identity

Single sign-on to thousands of popular, preintegrated SaaS apps, such as Salesforce, Concur, and Office 365. Single sign-on and directory synchronization extend your directory services to the cloud and provide your users with single-sign-on authentication experience

Devices

Detect threats with Behavioral Analytics

Apps

Recommendations for investigation and mitigation for suspicious activities

Security

Deploy and configure access to corporate resources across your on-premises environment and cloud applications while helping to protect corporate data. You retain control of your data, even when it is shared with others.

On-premises

Deploy native public and SaaS APPS

Cloud

Deploy and configure access to corporate resources

More information about our cloud offerings is available here.

Deployment Options

On-premises

Deploy native public and SaaS APPS

Enjoy the scalability and cost savings benefits of the cloud without sacrificing security.

Cloud

Deploy and configure access to corporate resources
