

Microsoft Dynamics 365 for Finance & Operations, Data Management

The Basics

Our Basics of Data Management is a detailed walkthrough of the Data Management Workspace in Microsoft Dynamics 365 for Finance and Operations. The aim of the training is to leave users with the ability and confidence to incorporate Data Management into their lives, thereby making their processes more efficient. During this training, we will cover the basics of the Data Management Workspace and delve into importing, exporting, entities and data projects.

As part of this training, users should have a basic understanding of Microsoft Dynamics 365 for Finance and Operations or an earlier version of Microsoft Dynamics. This training is focused on the basics of the Data Management Workspace and does not cover integration, creation of new entities, nor communication with other Microsoft applications.
