What is Power BI?

Microsoft Power BI is a data visualization tool that works to turn your unrelated sources of data into coherent, visually immersive, and interactive insights. Whether your data is a simple Excel spreadsheet, or a collection of cloud-based and on-premises hybrid data warehouses, Power BI lets you easily connect to your data sources, visualize (or discover) what's important, and share that with anyone and everyone you want.

Where do we start?

Power BI is a powerful data transformation and visualization tool which can be used to build a very complex enterprise reporting solution. Complex solutions often involve advanced technical and development skills, which not everyone or every business has access to. The good news is that there are more basic ways to begin benefitting from Power BI, which can then be used as a launching point to determine the level of complexity and investment that your company would most benefit from.
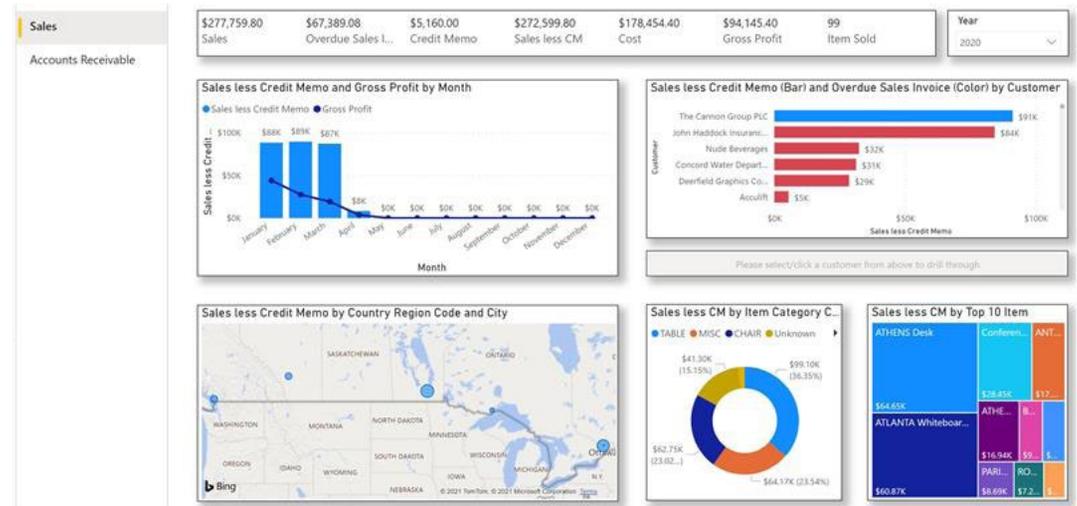

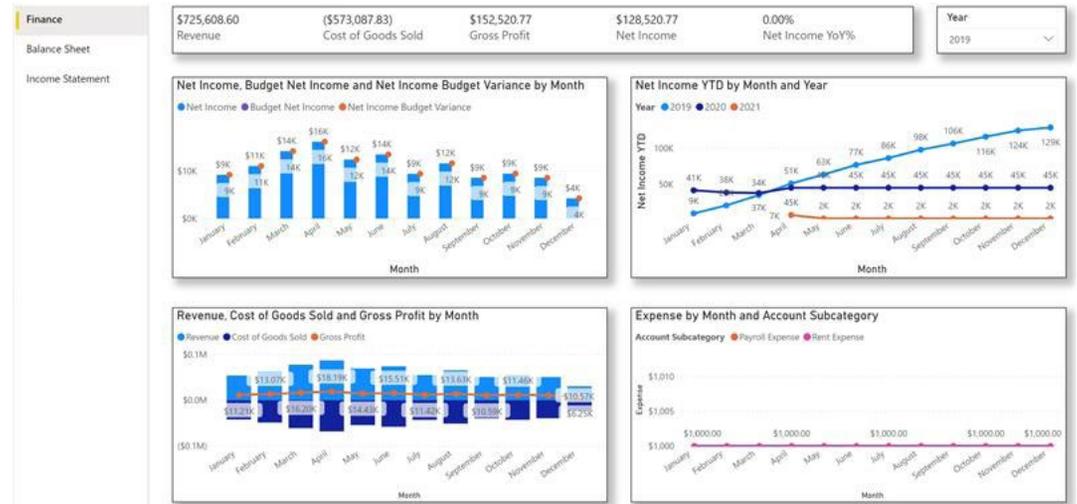

To help you take this first step, Encore has developed an entry level Power BI app that can be implemented for out of the box Dynamics 365 Business Central data. It is a small investment to get a look at what Power BI can do, and to foster ideas on where you might want to take it within your business.
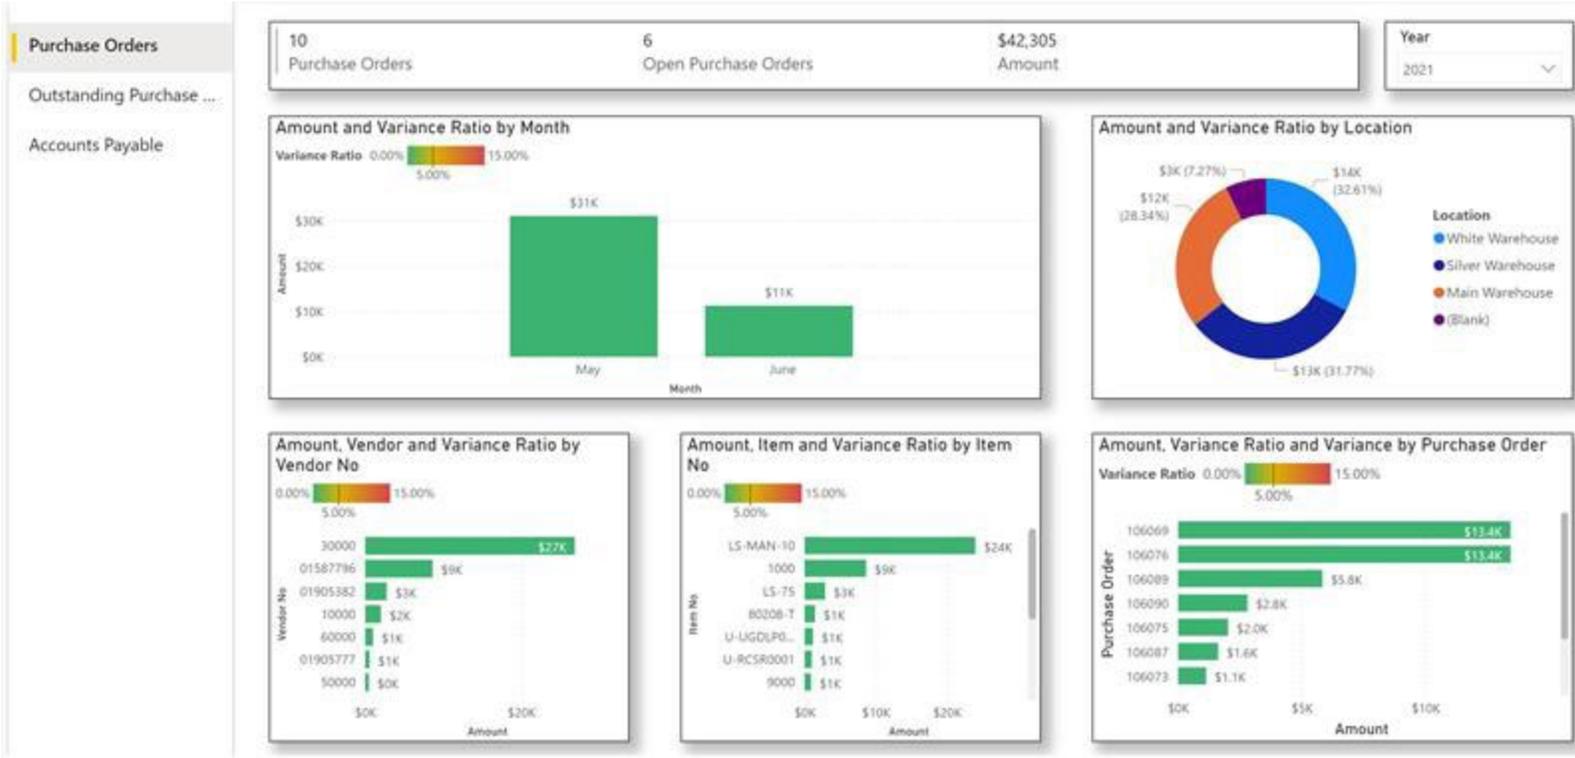

"Analysts and Data Scientists spend up to **80% of their time on data preparation** delaying the ability to analyze information and make timely decisions"   - Gartner

What does the solution include?

Currently there are three modules with more on the way. The first module is Finance which includes Revenue, COGS, Gross and Net Income, Year over year performance along with Actual vs Budgeted Net Income. You also receive Balance Sheet and Income Statement reports that let you drill down into the GL entries in Business Central. The Sales module lists Sales KPIs, performance by month or map representation of geographical performance and item performance and Accounts Receivable metrics along with overdue accounts. The Purchasing module rounds out the solution by providing data on Purchase Orders, Accounts Payable and Purchase Order variance.

encore

The Microsoft Power BI app for Business Central provides a powerful set of reports and dashboards that will be implemented for you. Once installed, you can create new visualizations, customize the branding, link to additional data sources and much more. You will no longer be dealing with historical static reports. You now have interactive and predictive reporting at your disposal using Power BI. Your Power BI app subscription gives you access to all the latest app features as they are released. Setup and upgrade of the app are included as part of your subscription price. You can also help to contribute ideas to improve the app by sharing your feedback with our development team through your Account Executive.

The Power BI app is billed monthly at only $75 per month per tenant. App users require a Power BI Pro license (not included in the price of the app).
